Fixed inputs
Target grid, sensor geometry, epoch and orbit orientation
Altitude cases
400, 500, 600, 700 km
GMAT trajectory output
Earth-fixed spacecraft position versus time
Target visibility
Sensor-cone test and Earth-occultation test
Observation windows
$\tau_{j,k} = t_{j,k+1}^{\text{start}} - t_{j,k}^{\text{end}}$
Mean revisit gap
$\bar{\tau}_j$
Maximum revisit gap
$\tau_j^{\max}$
Daily coverage
C_d
